# Images SI, Inc.'s UFO Detector

Apply power to the UFO Detector with the included 9V wall transformer. After 1 second the detector will beep once and the LED light will begin lighting in a rotating fashion.
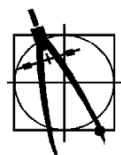

## Testing

Test the UFO Detector by waving a magnet over the detector as shown in the top two images below. This will cause an alarm to sound and all the LED lights to flash simultaneously.

This is a magnet.

The device detects the moving magnet as a magnetic anomaly and potential UFO sighting.

## Resetting

To reset the alarm, simply turn the UFO Detector upside down as shown below. When the UFO Detector is set upright, it will beep once and the rotation of lights will begin again.

To reset detector, simply turn it upside down.
